

PINE SCHOOL

HOBE SOUND, FL

PROJECT DESCRIPTION

Education requires an elusive dose of order and chaos, predictability and improvisation in order to succeed. The program for this school called for classrooms and labs for group learning, a library for individual and group study, and places for assembly, performance, athletics and relaxation. It is an academic village where groups emerge, are disbanded and regroup: a community for learning, growing and discovering.

The campus design is a functional and formal response to a specific educational vision and program of both active and continuous expansion and inward change. Its structure promotes education and profoundly engages the specifics of its location: "touched" environment re-defining itself through the introduction of children and teachers.

PRIMARY COMPONENTS

stucco, fritted structural glazing, perforated aluminum, galvalume siding, polished concrete, fiber cement panels, tensile fabric shading components, extensive daylighting

COMPLETED 2007
